THE HISTORY OF INTERNET

In the beginning of the 1970`s in USA was an older military network called ARPANET
converted to Internetvork wish was a network between networks. Accept a few
Universities
was it foremost enterprices and organisations wich was important for the american
army who was connected to Internetwork.

Resons of security made Internetwork anarchistic.It wasen`t supose to be any cental
computer wich controlled Internetwork and the computertrafic was supose to direct
it self so if a thought
road suddenly wasen`t accessible the trafic should find a new way by it self.
Because of this the enemy couldent in war strike out Intenetwork by bombing
individual servers and main computers.

In the end of the 1970`s was allmost all american Universities and majority
connected to
it so called protocoll TCP/IP wich to day is the main glue in Internet.

In 1985 Internet had grovn to the wolds gratest network and more and more
organisation outside USA connected them self to Internet. But still most people
haden`t heard of Internet.
First under the 90`s Internet began to become a rather known word among the public.
At the same time 1991 Gopfer was released.Gopher made it posibly to click yone self
forward in a Windows envioroment with your mouse instead of typing long,difficult
UNIX command.
Two years later the next revolution WWW was released. WWW made it abel for
ordinary peoply the surf on internet. Internet began to grow wery fast 1993 it
became posible for enterprices to rent ecces to internet to privitepersons.At the
same time it came a new generations of modem more then 10 times fastern the the old
ones this made connection for privatepersons posible.
